## 1 Introduction

This document is created in order to give a brief overview of the measurement capabilities of the EISCAT radar systems. It describes standard experiments, that is experiments that are used in the common programmes, and other supported experiments to aid the understanding of their differences.

## 2 Overview

Before making measurements with EISCAT, there are some choices that the experimenter has to make: the geographic/geomagnetic location, the time of day and year, the ionospheric region, the resolutions in time and space, the antenna scan patterns, and so on. These choices naturally depend on the scientific objectives of the measurements, but for some of the choices knowledge of the radar systems is needed.

## 2.1 The radar systems

EISCAT Scientific Association operates three radar systems (UHF, VHF and ESR) with transmitters on two geographical locations, working in three different radio frequency ranges.

- The UHF (Ultra High Frequency) system operates at a frequency range around 929 MHz with a transmitter and receiver on the Ramfjordmoen site near Tromsø (see Table 1). The antenna is a 32 m steerable parabolic dish.
- The VHF (very High Frequency) system operates at a frequency range around 224 MHz with a transmitter and receiver on the same site as the UHF system (Ramfjordmoen near Tromsø). The antenna consists of four 30 m x 40 m tiltable rectangular dishes, limited to point in the zenith direction or northward.
- The ESR (EISCAT Svalbard Radar) system operates at a frequency range around 500 MHz with a transmitter and receiver at Longyearbyen on Svalbard. The system consists of two antennas: one fully steerable 32 m parabolic dish, and one fixed 42 m parabolic dish pointing in the direction of the local magnetic field. This set-up enables simultaneous measurements in two different directions.

Table 1: Geographic location of the EISCAT radar facilities.

Location	Country	Coordinates		
Tromsø	Norway	69°35′ N	19°14′ E	
Longyearbyen	Svalbard	78 <i>°</i> 9′ N	16°1′ E	

## 2.2 Antenna scan patterns

EISCAT has pre-defined a set of antenna scan patterns that should be useful for most scientific measurements. They are named after the Common Programme they are used in.

#### 2.2.1 Mainland systems

The UHF and VHF radars are often operated simultaneously during the Common Programme experiments. Such observations offer comprehensive data sets for atmospheric, ionospheric, and magnetospheric studies.

- Common Programme One, CP-1, uses a fixed transmitting antenna, pointing along the geomagnetic field direction. CP-1 is capable of providing results with very good time resolution and is suitable for the study of substorm phenomena, particularly auroral processes where conditions might change rapidly. On longer time scales, CP-1 measurements support studies of diurnal changes, such as atmospheric tides, as well as seasonal and solar-cycle variations.
- Common Programme Two, CP-2, is designed to make measurements from a small, rapid transmitter antenna scan. One aim is to identify wavelike phenomena with length and time scales comparable with, or larger than, the scan (a few tens of kilometers and about ten minutes). The first three positions form a triangle with vertical, south, and south-east positions, while the fourth is aligned with the geomagnetic field.
- Common Programme Three, CP-3, covers a 10° latitudinal range in the F-region with a 16-position scan up to 74°N in a 24 min cycle. The observations are made in a plane defined by the magnetic meridian through Tromsø. The principal aim of CP-3 is the mapping of ionospheric and electrodynamic parameters over a broad latitude range.
- Common Programme Four, CP-4, covers geographic latitudes up to almost 80 °N (77 °N invariant latitude) using a low elevation, with a possible split-beam configuration. CP-4 is particularly suitable for studies of high latitude plasma convection and polar cap phenomena. However, with the present one-beam configuration of the VHF radar, CP-4 is run with either both UHF and VHF radars or with UHF only in a two position scan.
- Common Programme Six, CP-6, is designed for low altitude studies, providing spectral measurements at mesospheric heights. Velocity and electron density are derived from the measurements and the spectra contain information on the aeronomy of the mesosphere. Vertical antenna pointing is used.
- Common Programme Seven, CP-7, probes high altitudes and is particularly aimed at polar wind studies. The present version, with only one of the VHF klystrons running, is designed to cover altitudes up to 1500 km vertically above Ramfjordmoen.

#### 2.2.2 The EISCAT Svalbard Radar

Equivalent Common Programme modes are available for the EISCAT Svalbard Radar.

- CP-1 is directed along the geomagnetic field (81.6° inclination).
- CP-2 uses a four position scan.
- CP-3 is a 15 position elevation scan with southerly beam swinging positions.
- CP-4 combines observations in the F-region viewing area with field-aligned and vertical measurements.
- CP-6 is similar to the mainland radar CP-6.
- CP-7 is similar to the mainland radar CP-7.

The different common programmes are usually run using a specific experiment, as denoted in Table 2. See next section for a brief overview of the different experiments.

## 2.3 Experiment overview

An EISCAT "experiment" is a set of instructions telling the transmitters, receivers and digital signal processing units what to do at what time. In order to considerably simplify for the users of the radar systems a set of standard experiments have been created. They differ in range coverage, range resolution, time resolution and spectral resolution so that they are fitted for studies of different regions of the ionosphere. Some experiments are usable when the antenna is scanning while others are best used at fixed antenna positions. Some experiments provide plasma line data in addition to the standard ion line data, and some experiments, in addition, collect raw voltage level data to be analysed by the more experienced user. Expert users can modify the standard experiments, or even create their own ones.

All supported EISCAT experiments are based on alternating codes, but the codes are of different lengths in different experiments.

Some parameters describing the standard experiments used by the EISCAT UHF radar are collected in Table 3. The experiments used when running Common Programmes are beata, bella and manda. The main difference between

Table 2: Common programmes and their connected experiments. Experiment names in italic indicates common programmes not normally run.

	UHF	VHF	ESR
CP-1	beata	beata	ipy
CP-2	beata	-	tyko
CP-3	bella	-	folke
CP-4	bella	bella	folke
CP-6	manda	manda	manda
CP-7	-	tau7	tau7

these experiments lies in the range coverage, as is illustrated in Figure 1. More details about these experiments are found in Section 3.1. Other supported experiments on the UHF radar are arc\_dlayer (optimised for D-region measurements), arc1 (good time resolution, for auroral studies) and tau1 (older experiment comparable to bella). More details on these specialised experiments are found in section Section 4.1.

Parameters describing the standard experiments used by the EISCAT VHF radar are collected in Table 4. The experiments used when running Common Programmes are beata, bella, manda and tau7. Similar to the UHF experiments, the main difference between these experiments is in the range coverage, as is illustrated in Figure 2. More details about these experiments are found in Section 3.2. Other supported experiments on the VHF radar are arc\_dlayer (optimised for D-region measurements), tau1 (older experiment with similar range span as tau7) and tau8 (older experiment with similar range span as bella). More details on these specialised experiments are found in section Section 4.2.

Parameters describing the standard experiments used by the EISCAT ESR radar are collected in Table 5. The experiments used when running Common Programmes are ipy, tyko, folke, manda and tau7. Differences include range coverage, as well as power consumption, and is illustrated in Figure 3. The folke experiment is using both the 32 m and the 42 m antennas, and can thus by default make observations in two directions at the same time. More details about these experiments are found in Section 3.3. Other supported experiments on the ESR radar are arc\_slice (good time resolution, for auroral studies), beata (an alternative to ipy or tyko), steffe (different range resolution for different range intervals), tau0 (older experiment with similar range span as tau7), hilde (two antennas, three different range resolutions) and taro (both antennas are used over a large range interval, but with different duty cycles). More details on these specialised experiments are found in section Section 4.3. The experiments using both antennas in coordination are thus folke, hilde and taro. In addition, ipy, tyko, tau7, arc slice, beata, steffe and taro can switch between the antennas.

When reading the following tables, we can also get quick estimates of range resolution (from baud length), spectral resolution (from the inversion of the multiplication of code length and baud length) and spectral range (inverse of sampling rate). However, the actual numbers may differ from these estimates depending on what is done during the digital signal processing.

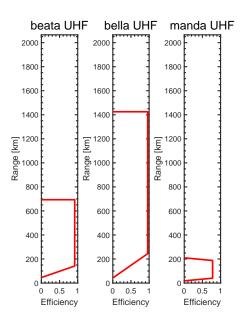

Figure 1: Overview of the ranges covered at the EISCAT UHF radar by the experiments used in the common programmes.

Table 3: EISCAT UHF radar standard experiments.

Name	Code length [bit]	Baud length [μs]	Sampling rate [µs]	Range span [km]	Time resolution [s]	Plasma line	Raw data

## 3 Experiments used in common programmes

#### 3.1 UHF

## 3.1.1 beata

Version 2.2
Raw data available No
Plasma line Yes
Transmitter frequency 927.2 MHz

Integration time 5.0 s

Code Alternating, 32 bit, 64 subcycles

Baud length 20 μs

Sampling rate 10 µs (0.4 µs plasma line)

Subcycle length 5.58 ms Duty cycle 0.115

**Ion line** Normal

Time resolution 5 s

Range span 49 km to 693 km

Range gate size
Spectral range
Spectral resolution
Lag step
Maximum lag

1.5 km
±50 kHz
1.22 kHz
10 μs
41 (410 μs)

Ion line Short slices

Time resolution 0.357 s

Range span 49 km to 693 km

Range gate size 1.5 kmSpectral range  $\pm 50 \text{ kHz}$ Spectral resolution 50.0 kHzLag step 10 µsMaximum lag 1 (10 µs)

Plasma line Two down-shifted frequency ranges

Time resolution 5 s

Range span 107 km to 374 km

Range gate size 3.0 kmSpectral range  $\pm 1.25 \text{ MHz}$ Spectral resolution 1.56 kHzLag step  $0.4 \text{ }\mu\text{s}$ Maximum lag  $800 (320 \text{ }\mu\text{s})$ 

#### 3.1.2 bella

Version 1.1
Raw data available No
Plasma line Yes

Transmitter frequency 927.2 MHz Integration time 926.8 s

Code Alternating, 30 bit, 64 subcycles

Baud length 45 μs

Sampling rate 15 µs (0.6 µs plasma line)

Subcycle length 11.25 ms Duty cycle 0.120

Ion line Normal

Time resolution 3.6 s

Range span 47 km to 1425 km

Range gate size 2.2 km
Spectral range ±33 kHz
Spectral resolution 1.04 kHz
Lag step 15 µs
Maximum lag 32 (480 µs)

Plasma line Two down-shifted frequency ranges

Time resolution 3.6 s

Range span 44 km to 735 km

Range gate size 138 km
Spectral range ±833 kHz
Spectral resolution 11.3 kHz
Lag step 0.6 µs
Maximum lag 74 (44.4 µs)

#### 3.1.3 manda

Version 4.0
Raw data available Yes
Plasma line No

Transmitter frequency 927.5 MHz Integration time 4.8 s

Code Alternating, 61 bit, 128 subcycles

Baud length 2.4 μs
Sampling rate 1.2 μs
Subcycle length 1.5 ms
Duty cycle 0.098

#### **Ion line** Normal

Time resolution 4.8 s

Range span 19 km to 209 km

Range gate size 0.36 km
Spectral range ±417 kHz
Spectral resolution 3.47 kHz
Lag step 1.2 µs
Maximum lag 120 (144 µs)

#### **Ion line** D region

Time resolution 4.8 s

Range span 19 km to 109 km

Range gate size 0.36 km Spectral range ±333 Hz Spectral resolution 2.62 Hz Lag step 1.5 ms

Maximum lag 127 (190.5 ms)

## Ion line D region, long lags

Time resolution 4.8 s

Range span 19 km to 109 km

Range gate size 0.36 km
Spectral range ±2.6 Hz
Spectral resolution 0.174 Hz
Lag step 192 ms
Maximum lag 15 (2.88 s)

## 3.2 VHF

#### 3.2.1 beata

Version 2.1 Raw data available No Plasma line Yes

Transmitter frequency 223.6 MHz Integration time 5.0 s

Code Alternating, 32 bit, 64 subcycles

Baud length 20 µs

Sampling rate 10 μs (0.8 μs plasma line)

Subcycle length 5.58 ms Duty cycle 0.115

Ion line Normal Time resolution

5.0 s

52 km to 663 km Range span

Range gate size 3.0 km Spectral range ±25 kHz Spectral resolution 0.781 kHz Lag step 20 µs Maximum lag 32 (640 µs)

## Plasma line Two down-shifted frequency ranges

Time resolution 5s

Range span 109 km to 375 km

Range gate size 3.0 km Spectral range ±1.25 MHz Spectral resolution 1.56 kHz Lag step 0.4 µs Maximum lag 800 (320 µs)

## 3.2.2 bella

Version 1.0
Raw data available No
Plasma line Yes

Transmitter frequency 223.6 MHz Integration time 23.6 s

Code Alternating, 30 bit, 64 subcycles

Baud length 45 µs

Sampling rate 45 µs (0.6 µs plasma line)

Subcycle length 11.25 ms Duty cycle 0.120

**Ion line** Normal, two signals (one per antenna half)

Time resolution 3.6 s

Range span 63 km to 1344 km

Range gate size 6.7 km
Spectral range ±11 kHz
Spectral resolution 0.370 kHz
Lag step 45 µs

Maximum lag 30 (1350 μs)

**Plasma line** Two down-shifted frequency ranges, two signals (one per antenna half)

Time resolution 3.6 s

Range span 56 km to 746 km

 $\begin{array}{lll} \text{Range gate size} & 138 \, \text{km} \\ \text{Spectral range} & \pm 833 \, \text{kHz} \\ \text{Spectral resolution} & 11.3 \, \text{kHz} \\ \text{Lag step} & 0.6 \, \mu \text{s} \\ \text{Maximum lag} & 74 \, (44.4 \, \mu \text{s}) \end{array}$ 

#### 3.2.3 manda

Version 4.0 Raw data available Yes Plasma line No

Transmitter frequency 223.4 MHz Integration time 4.8 s

Code Alternating, 61 bit, 128 subcycles

Baud length 2.4 μs Sampling rate 1.2 μs Subcycle length 1.5 ms Duty cycle 0.098

lon line Normal, two signals (one per antenna half)

Time resolution 4.8 s

Range span 19 km to 209 km

Range gate size 0.36 km Spectral range ±417 kHz Spectral resolution 3.47 kHz Lag step 1.2 μs Maximum lag 120 (144 μs)

**Ion line** D region, two signals (one per antenna half)

Time resolution 4.8 s

Range span 19 km to 109 km

Range gate size 0.36 km Spectral range ±333 Hz Spectral resolution 2.62 Hz Lag step 1.5 ms

Maximum lag 127 (190.5 ms)

lon line D region, long lags, two signals (one per antenna half)

Time resolution 4.8 s

Range span 19 km to 109 km

Range gate size 0.36 km
Spectral range ±2.6 Hz
Spectral resolution 0.174 Hz
Lag step 192 ms
Maximum lag 15 (2.88 s)

#### 3.2.4 tau7

Version 2.0
Raw data available No
Plasma line Yes

Transmitter frequency 223.6 MHz Integration time 3.6 s

Code Alternating, 16 bit, 32 subcycles

Baud length 120 µs

Sampling rate 15 µs (0.6 µs plasma line)

Subcycle length 16.065 ms Duty cycle 0.120

Ion line Normal

Time resolution 3.6 s

Range span 78 km to 2057 km

 $\begin{array}{ll} \text{Range gate size} & 18 \, \text{km} \\ \text{Spectral range} & \pm 33 \, \text{kHz} \\ \text{Spectral resolution} & 0.260 \, \text{kHz} \\ \text{Lag step} & 15 \, \mu \text{s} \end{array}$ 

Maximum lag 128 (1920 μs)

## Plasma line Two down-shifted frequency ranges

Time resolution 3.6 s

Range span 44 km to 735 km

Range gate size 138 km Spectral range ±833 kHz Spectral resolution 4.19 kHz Lag step 0.6 µs

Maximum lag 199 (119.4 μs)

#### 3.3 **ESR**

#### 3.3.1 folke

Version 2.0

Antenna Dual, four parts 32 m, one part 42 m

Raw data available No Plasma line Yes

Transmitter frequency 499.85 MHz and 500.15 MHz

Integration time 6.4 s

Code Alternating, 16 bit, 32 subcycles Baud length 100 µs (32 m) and 50 µs (42 m) Sampling rate 25 µs (0.4 µs plasma line)

Subcycle length 7.950 ms (32 m) + 7.975 ms (32 m) + 4.075 ms (42 m) = 20.000 ms

Duty cycle 0.160 (32 m) + 0.040 (42 m) = 0.200

**Ion line** Normal, 32 m

Time resolution 6.4 s

Range span 45 km to 896 km

Range gate size 3.7 km
Spectral range ±20 kHz
Spectral resolution 0.645 kHz
Lag step 25 µs
Maximum lag 31 (775 µs)

lon line Top end, 32 m

Time resolution 6.4 s

Range span 911 km to 1106 km

Range gate size 15.0 kmSpectral range  $\pm 20 \text{ kHz}$ Spectral resolution 0.625 kHzLag step  $25 \mu \text{s}$ Maximum lag  $32 (800 \mu \text{s})$ 

Ion line Normal, 42 m

Time resolution 6.4 s

Range span 45 km to 476 km

 $\begin{array}{lll} \text{Range gate size} & 3.7 \, \text{km} \\ \text{Spectral range} & \pm 20 \, \text{kHz} \\ \text{Spectral resolution} & 0.645 \, \text{kHz} \\ \text{Lag step} & 25 \, \mu \text{s} \\ \text{Maximum lag} & 31 \, (775 \, \mu \text{s}) \end{array}$ 

lon line Top end, 42 m

Time resolution 6.4 s

Range span 484 km to 581 km

Range gate size 7.5 km Spectral range  $\pm 20 \text{ kHz}$ Spectral resolution 1.25 kHz Lag step 25  $\mu$ s Maximum lag 16 (400  $\mu$ s)

## Plasma line Two down-shifted and two up-shifted frequency ranges, 32 m

Time resolution 6.4 s

Range span 41 km to 655 km

Range gate size
Spectral range
Spectral resolution
Lag step
Maximum lag

123 km
±1.25 MHz
5.02 kHz
0.4 µs
249 (99.6 µs)

## Plasma line Two down-shifted and two up-shifted frequency ranges, 42 m

Time resolution 6.4 s

Range span 41 km to 348 km

Range gate size 61 km
Spectral range ±1.25 MHz
Spectral resolution 10.1 kHz
Lag step 0.4 μs

Maximum lag 124 (49.6 μs)

### 3.3.2 ipy

Version 4.2

Antenna Single, switchable Raw data available Yes, on fixed 42p scan

Plasma line Yes

Transmitter frequency 499.85 MHz

Integration time 6.0 s

Code Alternating, 30 bit, 64 subcycles

Baud length 30 µs

Sampling rate 15 µs (0.4 µs plasma line)

Subcycle length 3.75 ms Duty cycle 0.240

**Ion line** Normal

Time resolution 6.0 s

Range span 28 km to 383 km

Range gate size
Spectral range
Spectral resolution
Lag step
Maximum lag

2.2 km
±33 kHz
0.813 kHz
15 μs
41 (615 μs)

**Ion line** Top end

Time resolution 6.0 s

Range span 388 km to 509 km

 $\begin{array}{lll} \mbox{Range gate size} & 4.5 \mbox{ km} \\ \mbox{Spectral range} & \pm 33 \mbox{ kHz} \\ \mbox{Spectral resolution} & 0.556 \mbox{ kHz} \\ \mbox{Lag step} & 15 \mbox{ \mus} \\ \mbox{Maximum lag} & 60 \mbox{ (900 } \mbox{ \mus)} \end{array}$ 

Plasma line One up-shifted and one down-shifted frequency range

Time resolution 6.0 s

Range span 93 km to 455 km

 $\begin{array}{ll} \text{Range gate size} & 4.5\,\text{km} \\ \text{Spectral range} & \pm 1.25\,\text{MHz} \\ \text{Spectral resolution} & 0.542\,\text{kHz} \\ \text{Lag step} & 0.4\,\mu\text{s} \end{array}$ 

Maximum lag 2304 (921.6 μs)

#### 3.3.3 manda

Version 4.1
Antenna Single
Raw data available Yes
Plasma line Yes

Transmitter frequency 500.3 MHz Integration time 4.0 s

Code Alternating, 64 bit, 128 subcycles

Baud length 4 µs

Sampling rate 2 µs (0.4 µs plasma line)

Subcycle length 1.25 ms Duty cycle 0.205

#### Ion line E region

Time resolution 4.0 s

Range span 23 km to 173 km

 $\begin{array}{ll} \text{Range gate size} & 0.6 \, \text{km} \\ \text{Spectral range} & \pm 250 \, \text{kHz} \\ \text{Spectral resolution} & 1.95 \, \text{kHz} \\ \text{Lag step} & 2 \, \mu \text{s} \end{array}$ 

Maximum lag 128 (256 μs)

## **Ion line** D region

Time resolution 4.0 s

Range span 23 km to 114 km

Range gate size 0.6 km Spectral range ±400 Hz Spectral resolution 3.15 Hz Lag step 1.25 ms

Maximum lag 127 (158.75 ms)

## Ion line D region, long lags

Time resolution 4.0 s

Range span 23 km to 114 km

Range gate size 0.6 km
Spectral range ±3.1 Hz
Spectral resolution 0.208 Hz
Lag step 160 ms
Maximum lag 15 (2.4 s)

#### **Ion line** F region

Time resolution 4.0 s

Range span 211 km to 361 km

Range gate size 0.6 km
Spectral range ±250 kHz
Spectral resolution 1.95 kHz
Lag step 2 µs

Maximum lag 128 (256 μs)

Plasma line E region, Two down-shifted and two up-shifted frequency ranges

Time resolution 4.0 s

Range span 61 km to 155 km

Range gate size 0.6 km
Spectral range ±1.25 MHz
Spectral resolution 3.9 kHz
Lag step 0.4 µs
Maximum lag 320 (128 µs)

Plasma line F-region, Two down-shifted and two up-shifted frequency ranges

Time resolution 4.0 s

Range span 229 km to 343 km

Range gate size 0.6 kmSpectral range  $\pm 1.25 \text{ MHz}$ Spectral resolution 3.9 kHzLag step  $0.4 \text{ }\mu\text{s}$ Maximum lag  $320 \text{ } (128 \text{ }\mu\text{s})$ 

#### 3.3.4 tau7

Version 1.0

Antenna Single, switchable

Raw data available No Plasma line Yes

Transmitter frequency 499.7 MHz Integration time 6.0 s

Code Alternating, 16 bit, 32 subcycles

Baud length

Sampling rate 5 μs (0.4 μs plasma line)

Subcycle length 9.375 ms Duty cycle 0.205

Ion line Normal Time resolution

 $6.0 \, s$ 

39 km to 1099 km Range span

Range gate size  $0.7 \, \text{km}$ ±100 kHz Spectral range Spectral resolution 0.840 kHz Lag step 5 us

Maximum lag 119 (595 μs)

Ion line Top end

Time resolution 6.0 s

1117 km to 1351 km Range span

Range gate size 18 km Spectral range ±100 kHz Spectral resolution 0.521 kHz Lag step 5 µs

Maximum lag 192 (960 µs)

Plasma line One down-shifted and one up-shifted frequency range, power spectrum only

Time resolution 6.0 s

Range span 98 km to 402 km Spectral range ±1250 kHz Spectral resolution 9.77 kHz

#### 3.3.5 tyko

Version 1.0

Antenna Single, switchable Raw data available Yes, on fixed 42p scan

Plasma line Yes
Transmitter frequency 499.9 MHz
Integration time 4.0 s

Code Alternating, 16 bit, 32 subcycles

Baud length 50 µs

Sampling rate 25 µs (0.4 µs plasma line)

Subcycle length 5.0 ms Duty cycle 0.160

**Ion line** Normal

Time resolution 4.0 s

Range span 32 km to 564 km

Range gate size 3.7 km
Spectral range ±20 kHz
Spectral resolution 0.645 kHz
Lag step 25 µs
Maximum lag 31 (775 µs)

**Ion line** Top end

Time resolution 4.0 s

Range span 571 km to 669 km

 $\begin{array}{lll} \mbox{Range gate size} & 7.5 \, \mbox{km} \\ \mbox{Spectral range} & \pm 20 \, \mbox{kHz} \\ \mbox{Spectral resolution} & 1.25 \, \mbox{kHz} \\ \mbox{Lag step} & 25 \, \mbox{\mu s} \\ \mbox{Maximum lag} & 16 \, (400 \, \mbox{\mu s}) \end{array}$ 

Plasma line Two down-shifted and two up-shifted frequency ranges

Time resolution 4.0 s

Range span 28 km to 450 km

Range gate size 61.4 km
Spectral range ±1.25 MHz
Spectral resolution 10.1 kHz
Lag step 0.4 μs

Maximum lag 124 (49.6 μs)

## 4 Other supported experiments

## 4.1 UHF

## 4.1.1 arc\_dlayer

Version 1.11
Raw data available No
Plasma line No

Transmitter frequency 929.6 MHz Integration time 5.0 s

Code Alternating, 64 bit, 128 subcycles

 $\begin{array}{lll} \text{Baud length} & 2\,\mu\text{s} \\ \text{Sampling rate} & 2\,\mu\text{s} \\ \text{Subcycle length} & 1.346\,\text{ms} \\ \text{Duty cycle} & 0.095 \end{array}$ 

## Ion line D-region

Time resolution 5.0 s

Range span 60 km to 139 km

Range gate size 0.3 km
Spectral range ±371 Hz
Spectral resolution 2.92 Hz
Lag step 1.346 ms

Maximum lag 127 (170.942 ms)

## Ion line E-region

Time resolution 5.0 s

Range span 60 km to 139 km

 $\begin{array}{lll} \text{Range gate size} & 0.3 \, \text{km} \\ \text{Spectral range} & \pm 16 \, \text{kHz} \\ \text{Spectral resolution} & 5.21 \, \text{kHz} \\ \text{Lag step} & 32 \, \mu \text{s} \\ \text{Maximum lag} & 3 \, (96 \, \mu \text{s}) \end{array}$ 

#### 4.1.2 arc1

Version 1.0 Raw data available No Plasma line No

Transmitter frequency 927.5 MHz Integration time 4.0 s

Code Alternating, 64 bit, 128 subcycles

Baud length 6 µs Sampling rate 6μs Subcycle length  $3.468\,\mathrm{ms}$ Duty cycle 0.111

Ion line Normal Time resolution 0.443 904 s 95 km to 420 km Range span

> Range gate size  $0.9\,\mathrm{km}$ Spectral range ±21 kHz Spectral resolution 1.39 kHz Lag step 24 µs Maximum lag 15 (360 µs)

#### 4.1.3 tau1

Version 1.3 Raw data available Yes Plasma line No

Transmitter frequency 929.3 MHz and 929.6 MHz

Integration time 5.0 s

Code Alternating, 16 bit, 32 subcycles

Baud length 60 µs Sampling rate 12 µs Subcycle length 11.16 ms Duty cycle 0.086

Ion line Normal Time resolution

5.0 s

48 km to 1353 km Range span

Range gate size 1.8 km Spectral range ±42 kHz Spectral resolution 1.44 kHz Lag step 12 µs 29 (348 µs) Maximum lag

## 4.2 VHF

## 4.2.1 arc\_dlayer

Version 1.11
Raw data available No
Plasma line No

Transmitter frequency 224.2 MHz Integration time 5.0 s

Code Alternating, 64 bit, 128 subcycles

 $\begin{array}{lll} \text{Baud length} & 2\,\mu\text{s} \\ \text{Sampling rate} & 2\,\mu\text{s} \\ \text{Subcycle length} & 1.346\,\text{ms} \\ \text{Duty cycle} & 0.095 \end{array}$ 

## **Ion line** D-region

Time resolution 5.0 s

Range span 60 km to 139 km

Range gate size 0.3 km
Spectral range ±371 Hz
Spectral resolution 2.92 Hz
Lag step 1.346 ms

Maximum lag 127 (170.942 ms)

## **Ion line** E-region

Time resolution 5.0 s

Range span 60 km to 139 km

 $\begin{array}{lll} \text{Range gate size} & 0.3 \, \text{km} \\ \text{Spectral range} & \pm 16 \, \text{kHz} \\ \text{Spectral resolution} & 5.21 \, \text{kHz} \\ \text{Lag step} & 32 \, \mu \text{s} \\ \text{Maximum lag} & 3 \, (96 \, \mu \text{s}) \end{array}$ 

#### 4.2.2 tau1

Version 1.30
Raw data available No
Plasma line No

Transmitter frequency 223.6 MHz and 224.2 MHz

Integration time 5.0 s

Code Alternating, 16 bit, 32 subcycles

 $\begin{array}{lll} \text{Baud length} & 72\,\mu\text{s} \\ \text{Sampling rate} & 24\,\mu\text{s} \\ \text{Subcycle length} & 15.6\,\text{ms} \\ \text{Duty cycle} & 0.074 \end{array}$ 

lon line Normal (two signals (one per antenna half) possible)

Time resolution 5.0 s

Range span 104 km to 2061 km

Range gate size 3.6 km
Spectral range ±21 kHz
Spectral resolution 0.718 kHz
Lag step 24 μs
Maximum lag 29 (696 μs)

#### 4.2.3 tau8

Version 1.11
Raw data available No
Plasma line Yes

Transmitter frequency 223.6 MHz and 223.4 MHz

Integration time 5.0 s

Code Alternating, 16 bit, 32 subcycles

Baud length 84 µs

Sampling rate 14 µs (0.6 µs plasma line)

Subcycle length 11.158 ms Duty cycle 0.120

**Ion line** Normal, two signals (one per antenna half)

Time resolution 5.0 s

Range span 52 km to 1307 km

Range gate size 2.1 km
Spectral range ±36 kHz
Spectral resolution 0.760 kHz
Lag step 14 µs
Maximum lag 47 (658 µs)

**Plasma line** Up-shifted frequency range, two signals (one per antenna half), spectral domain only

Time resolution 5.0 s

 $\begin{array}{ll} \text{Range span} & 53\,\text{km to }686\,\text{km} \\ \text{Range gate size} & 4\times213\,\text{km} \\ \text{Spectral range} & \pm833\,\text{kHz} \\ \text{Spectral resolution} & 13.0\,\text{kHz} \end{array}$ 

## 4.3 ESR

## 4.3.1 arc\_slice

Version 1.10

Antenna Single, switchable

Raw data available No Plasma line No

Transmitter frequency 500.95 MHz

Integration time 5.0 s

Code Alternating, 64 bit, 128 subcycles

Baud length 6μs Sampling rate 6μs Subcycle length 3.906 ms Duty cycle 0.098

Ion line Slices Time resolution 0.5 s

Range span 85 km to 481 km

Range gate size  $0.9\,\mathrm{km}$ Spectral range ±21 kHz Spectral resolution 1.39 kHz Lag step 24 µs Maximum lag 15 (360 µs)

#### 4.3.2 beata

Version 1.0

Antenna Single, switchable Yes, on fixed 42p scan Raw data available

Plasma line Yes

Transmitter frequency 500.3 MHz Integration time 6.0 s

Code Alternating, 30 bit, 64 subcycles

Baud length

Sampling rate 25 μs (0.4 μs plasma line)

Subcycle length 6.25 ms Duty cycle 0.240

**Ion line** Normal Time resolution

 $6.0 \, s$ 

45 km to 625 km Range span

Range gate size 3.7 km Spectral range ±20 kHz Spectral resolution 0.488 kHz Lag step 25 us Maximum lag 41 (1025 µs)

Ion line Short slices

Time resolution 0.4 s

45 km to 625 km Range span

Range gate size 3.7 km Spectral range ±20 kHz Spectral resolution 20.0 kHz Lag step 25 µs Maximum lag  $1(25 \mu s)$ 

Plasma line One down-shifted and one up-shifted frequency range

Time resolution 6.0 s

154 km to 281 km Range span

Range gate size 7.5 km Spectral range ±1250 kHz Spectral resolution 0.610 kHz Lag step  $0.4 \mu s$ 

Maximum lag 2048 (819.2 µs)

#### 4.3.3 hilde

Version 1.01

Antenna Dual, one part 32 m, one part 42 m

Raw data available Yes, from 32 m if chosen

Plasma line No

Transmitter frequency 500.4 MHz, 499.8 MHz, 500.1 MHz and 499.5 MHz

Integration time 5.1 s

Code Alternating, 16 bit, 32 subcycles

Baud length 32 μs, 96 μs and 60 μs Sampling rate 16 μs (42 m), 20 μs (32 m)

Subcycle length 10.000 ms (42 m) + 9.920 ms (32 m) = 19.92 ms

Duty cycle 0.103 (42 m) + 0.096 (32 m) = 0.199

## Ion line Long pulse, 42 m

Time resolution 5.1 s

Range span 34 km to 917 km

Range gate size 2.4 km
Spectral range ±31 kHz
Spectral resolution 0.893 kHz
Lag step 16 µs
Maximum lag 35 (560 µs)

## Ion line Short pulse, lower ranges, 42 m

Time resolution 5.1 s

Range span 34 km to 217 km

Range gate size 2.4 km
Spectral range ±31 kHz
Spectral resolution 1.01 kHz
Lag step 16 µs
Maximum lag 31 (496 µs)

## Ion line Short pulse, upper ranges, 42 m

Time resolution 5.1 s

Range span 488 km to 963 km

Range gate size 2.4 km
Spectral range ±31 kHz
Spectral resolution 1.84 kHz
Lag step 16 µs
Maximum lag 17 (272 µs)

### lon line Upper ranges, 32 m

Time resolution 5.1 s

Range span 181 km to 1288 km

Range gate size 3.0 km
Spectral range ±25 kHz
Spectral resolution 0.862 kHz
Lag step 20 µs
Maximum lag 29 (580 µs)

**Ion line** Lower ranges, 32 m

Time resolution 5.1 s

Range span 35 km to 1141 km

Range gate size 3.0 km
Spectral range ±25 kHz
Spectral resolution 0.862 kHz
Lag step 20 µs
Maximum lag 29 (580 µs)

Ion line Undecoded long pulse, interval 1, 42 m

Time resolution 5.1 s

Range span 111 km to 917 km

Range gate size 2.4 km
Spectral range ±31 kHz
Spectral resolution 5.21 kHz
Lag step 16 µs
Maximum lag 6 (96 µs)

Ion line Undecoded long pulse, interval 2, 42 m

Time resolution 5.1 s

Range span 1334 km to 2405 km

Range gate size 2.4 kmSpectral range  $\pm 31 \text{ kHz}$ Spectral resolution 5.21 kHzLag step  $16 \mu \text{s}$ Maximum lag  $6 (96 \mu \text{s})$ 

#### 4.3.4 steffe

Version 2.00

Antenna Single, switchable

Raw data available No Plasma line Yes

Transmitter frequency 499.7 MHz and 500.1 MHz

Integration time 6.4 s

Code Alternating, 16 bit, 32 subcycles

Baud length 30 µs and 105 µs

Sampling rate 15 µs (0.6 µs plasma line)

Subcycle length 9.375 ms Duty cycle 0.230

#### **Ion line** Long pulse

Time resolution 6.4 s

Range span 34 km to 800 km

Range gate size 2.2 km
Spectral range ±33 kHz
Spectral resolution 0.813 kHz
Lag step 15 μs
Maximum lag 41 (615 μs)

## Ion line Long pulse, top end

Time resolution 6.4 s

Range span 816 km to 1021 km

Range gate size 15.7 km
Spectral range ±33 kHz
Spectral resolution 0.521 kHz
Lag step 15 µs
Maximum lag 64 (960 µs)

## **Ion line** Lower range

Time resolution 6.4 s

Range span 34 km to 221 km

Range gate size 2.2 km Spectral range ±33 kHz Spectral resolution 1.08 kHz Lag step 15 μs Maximum lag 31 (465 μs)

#### Ion line Lower range, top end

Time resolution 6.4 s

Range span 226 km to 284 km

Range gate size 4.5 km
Spectral range ±33 kHz
Spectral resolution 1.04 kHz
Lag step 15 µs
Maximum lag 32 (480 µs)

Ion line Upper range

Time resolution 6.4 s

Range span 513 km to 1033 km

Range gate size 2.2 km
Spectral range ±33 kHz
Spectral resolution 1.96 kHz
Lag step 15 µs
Maximum lag 17 (255 µs)

Plasma line Two down-shifted and two up-shifted frequency ranges

Time resolution 6.4 s

Range span 235 km to 361 km

 $\begin{array}{ll} \text{Range gate size} & 9.0 \, \text{km} \\ \text{Spectral range} & \pm 833 \, \text{kHz} \\ \text{Spectral resolution} & 0.543 \, \text{kHz} \\ \text{Lag step} & 0.6 \, \mu \text{s} \end{array}$ 

Maximum lag 1536 (921.6 μs)

#### 4.3.5 taro

Version 1.0

Antenna Dual, two parts 32 m, one part 42 m

Raw data available No Plasma line No

Transmitter frequency 500.1 MHz, 499.5 MHz, 500.4 MHz and 499.8 MHz

Integration time 6.4 s

Code Alternating, 16 bit, 32 subcycles

Baud length 50 µs Sampling rate 25 µs

Subcycle length 6.425 ms and 6.775 ms (32 m) + 6.800 ms (42 m) = 20.0 ms

Duty cycle 0.160 (32 m) + 0.080 (42 m) = 0.240

## **Ion line** Upper ranges

Time resolution 6.4 s

Range span 170 km to 830 km

Range gate size 3.7 km
Spectral range ±20 kHz
Spectral resolution 0.645 kHz
Lag step 25 μs
Maximum lag 31 (775 μs)

## Ion line Lower ranges

Time resolution 6.4 s

Range span 47 km to 706 km

Range gate size 3.7 kmSpectral range  $\pm 20 \text{ kHz}$ Spectral resolution 0.645 kHzLag step  $25 \mu \text{s}$ Maximum lag  $31 (775 \mu \text{s})$ 

## Ion line Lower ranges, top end

Time resolution 6.4 s

Range span 714 km to 811 km

Range gate size 7.5 km
Spectral range ±20 kHz
Spectral resolution 1.25 kHz
Lag step 25 μs
Maximum lag 16 (400 μs)

#### 4.3.6 tau0

Version 5.10

Antenna Single, switchable

Raw data available No Plasma line No

Transmitter frequency 500.125 MHz and 499.875 MHz

Integration time 6.4 s

Code Alternating, 16 bit, 32 subcycles

Baud length 60 µs Sampling rate 20 µs

Subcycle length 10.00 ms and 9.98 ms (alternating)

Duty cycle 0.192

## **Ion line** Upper ranges

Time resolution 0.5 s

Range span 206 km to 1297 km

Range gate size 3.0 kmSpectral range  $\pm 25 \text{ kHz}$ Spectral resolution 0.962 kHzLag step  $20 \text{ }\mu\text{s}$ Maximum lag  $26 (520 \text{ }\mu\text{s})$ 

## Ion line Lower ranges

Time resolution 0.5 s

Range span 53 km to 1144 km

Range gate size 3.0 kmSpectral range  $\pm 25 \text{ kHz}$ Spectral resolution 0.962 kHzLag step 20 µsMaximum lag 26 (520 µs)
